

CS427 Iteration 3 Meeting Agenda

- Discuss the major changes to the project directory and general conventions for the new directory structure.
- Review the progress of each pair for the current iteration.
- Discuss any major problems faced by pairs during the current iteration.
- Discuss code details and design for each pair (in particular, the schema for the databases implemented this iteration).
- Discuss segments of the code that may need refactoring/reviewing.
- Prioritize important refactorings/user stories for the final project iteration.
- Establish four independent workloads based on the previously discussed list of priorities.
- Assign pairs for the next iteration such that pair members are familiar with the code related to their assigned workload.
- Update the listing of user stories based on the tasks that will be completed during the final iteration week.
